

Economic Costs showed new information linking particulate air pollution to nearly 16,000 preterm births per year. Under the Smoggy Skies Act

This bill would require the EPA to consider technological feasibility in choosing a limit within that range, the bill would interject implementation considerations, including projections of adverse economic and energy effects, into the standard setting process. These changes will permanently weaken the core health-based premise of the Clean Air Act protecting the public from known health effects of air pollution with a margin of safety.

These changes would reverse the intent of the Clean Air Act, explicitly included by its bipartisan authors in Congress that
